Suscoin whitepaper

Suscoin was created in Q2 2022 after I recognized that there was a distinct lack of original meme tokens on the Syscoin NEVM network. I took what I learned from the launch of my other project $UTTKE aka Uttkoin, and also the contract failure of another project and created this with bare minimum ERC20 functionality to ensure it will always stick around. The name was inspired by my attempts to shill people on Syscoin and having 9/10 reply with:

"Syscoin? More like Suscoin".

Here is our complete code:

```solidity
pragma solidity ^0.8.0;

import "@openzeppelin/contracts/token/ERC20/ERC20.sol";

contract DevToken is ERC20{

    constructor() ERC20("Suscoin", "SUS"){

        _mint(0x2AEADC6D7f7aaC503a5C314593b3afF953b7eE89,100000000*10**18);

    }

}
```
